

YOUR TRADING GUIDE

Welcome to Binomo! Here's your guide to help you grow your skills, increase your income, and start feeling at home on the platform (and in trading, too).

Where to begin

Start from Traderoom — where you can see the markets in real time:

- Switch to the demo account (created for testing and learning),
- Choose the chart type (Candles, for example) and the time frame (5-15s, for example)
- Choose the trading mechanics (FTT, 5ST, or another)
- Choose the asset (Crypto IDX, EUR/USD, or another)
- Track the price curve and press UP or DOWN when ready!

If your forecast is correct, you benefit (on the demo account). We recommend testing new tools and strategies **on the demo account** and switching to the real one when ready. Trading on the demo account improves your skills, whereas a **real account** increases your real profit.

How to grow

Binomo allows you to grow as a trader using trading tools and strategies. You can learn how to use them via our Telegram channel, Binomo Blog, and educational courses (you can subscribe in the *Market* section on the web version of Binomo).

 **Drawing tools** are handy for seeing big price moves, such as trends and reversal points. Use Ray, Trendline, Channel, and others to see the market situation more clearly.

 **Trading tools** will give you the most accurate price forecasts in any market situation. We chose the most popular and reliable tools created by world-famous traders, investors, financial analysts, and mathematicians.

The Binomo platform has over 15 technical indicators: Moving Average, Bollinger bands, Stochastic, and more! Use them to forecast trends and flats and choose the best trade time.

 **Trading strategies** are ready-to-use instructions on trading in different market conditions. They are based on technical indicators, drawing tools, chart patterns, or combinations. Strategies allow traders to obtain and check trading signals to decrease risks and increase profits.

Our strategies are free to use and are available in the *Strategies* section on Binomo (available on the web and in your mobile browser). Also, you can have lessons and courses on trading and psychology via our Telegram channel.

How to obtain bonuses

Bonuses are benefits that you can receive on the platform. Bonuses can increase your trading capabilities (deposit and no-deposit bonuses, risk-free trades), your income (Happy Hours, Cashback), or decrease your losses (Insurance).

The number and type of bonuses depend on your status and trading activity. You can also get the bonus through our promotion, chatbot, on Binomo's social media, or Binomo Blog.

We recommend visiting the *Statuses* and *Bonuses* sections to learn more. You may already have the bonus. If so, activate it and enjoy your trading!

How to earn more funds

Invite Friends

You can attract friends and acquaintances on the Binomo platform and earn **up to \$100** (or equivalent in your currency) on your real account. How to do it? Easy:

- Have a Standard or higher status. If you are a VIP, you'll get twice bigger rewards.
- Share your unique referral link with your friends and ask them to sign up by using it.
- Track their progress: signing up, making their first deposit, and completing trading turnover.
- Enjoy your rewards! You'll receive up to \$20 for each attracted trader, whereas your friends will receive \$10.

Please [visit your profile](#) to learn more and enroll in the program immediately.

Join Tournaments

There are plenty of them: Fortnight, Victory, Road... The list is updated monthly, and each contest has specific rules. Top traders share the prize pool, and funds are credited to their real accounts! Start from Daily Free, one of the most popular tournaments on the platform.

Take part in 1v1

1v1 is a special trading format allowing you to compete against another Binomo trader. The 1v1 rules are simple: you should pay the \$15 entry fee, find the rival, and score the highest points in the following 15 minutes. If you score more points than your rival, you'll cover your expenses and get your rival's entry fee — **\$28,5 in general!**

Visit the *Tournaments* section to learn more and join. The feature is now available on the Binomo web version.

Are you ready?

Now it's your turn to make a move. Keep the guide till you finish exploring the platform. We wish you pleasant and profitable trading!

If you need help or advice, we are here to help. You can contact us via chatbot, email support@binomo.com, or personal manager (the option is available for VIP and Prestige traders).

5 PSYCHOLOGY TIPS TO TRADE BETTER

Did you know that up to 80% of trading success depends on psychology? Pros take courses on trading psychology to improve their results by controlling emotions. We give you 5 basic rules to help you act like a mature trader!

TIP #1. Don't compare yourself to others

The media love big names, such as Warren Buffett and Michael Burry, whom they mention here and there. Hearing about others' success and growing wealth can be demotivating, especially when we compare ourselves to them.

Celebrities often look perfect, so we recommend you meet real traders. They are on Binomo's social media, trading forums, and chats. This will allow you to see real trading and get support, advice, and help.

TIP #2. Have a plan for the day

Uncertainty can be frightening — it becomes obvious when the markets go down, and you can't explain why. This is why you should know what to do in any situation.

Always make a plan for trading. Describe the suitable and unsuitable market situation (trend or flat, morning or night), asset choice, time frames, strategies, and money-management rules.

We can't control the market but can decide what to do with it. When the situation is suitable, we follow our plan. When the situation doesn't comply with your plan, don't trade. This will save your funds and your nerves.

TIP #3. Get rid of stress before it influences your decisions

Trading can be joyful but also unpredictable. When markets do not behave as expected, our bodies can react to uncertainty like we are in danger. The adrenaline level in our blood increases because our body is ready to run.

Stress also affects our thinking ability — we aren't concentrated or calm. This is why it's quite helpful to have a couple of techniques that decrease the stress level:

 Exercise. For example, do 10-15 sit-ups or run for 5-10 minutes. This will help you eliminate excessive energy and feel relieved.

 Practice "square breathing": 1 — breathe in, 2 — hold your breath, 3 — breathe out, 4 — hold your breath. This will allow you to calm your breathing, and your body get the signal that the danger is no longer here.

TIP #4. Celebrate your victories

Our brain is accustomed to paying more attention to dangers than pleasant things. We remember our failures and mistakes automatically. That's why you should record your wins daily.

We recommend keeping a Trader's Journal and describing your positive experiences on the platform — for example, successful trades, strategies, and tools.

It will allow you to balance losses with good memories and findings as a trader. Consequently, you'll always have the energy to grow and develop.

TIP#5. Track your progress

Recent emotions are the brightest, so it's easy to give up on trading practice after a bad day. Big changes are seen from a distance. We advise planning your trading way. Task trackers like Trello or Asana will be quite helpful.

- Create the list of skills you need as a trader. For example, to learn a new indicator, test a new strategy, trade a new asset, and try 5ST mechanics and multi-window mode.
- Move the task, according to its status, into the specific column. These can be "Backlog" (skills to acquire), "In progress" (skills that you are acquiring right now), "Held" (skills that you can't master for some reason), and "Completed." (skills that you've received).
- Check your tasks in each column daily, and move them from column to column according to your progress.

Task trackers make your progress more visible and stimulate you to go on. Psychologists say that when we complete tasks, we increase the level of endorphins, neurotransmitters that increase feelings of well-being.

LES TWINS (EMA, SMA)

Type of strategy: Trend
Timeframe: 15 - 60 s
Assets to trade: Currency pairs
Complexity level: Beginner

This strategy is based on two indicators, SMA and EMA. They are two types of a moving average. On a chart, SMA and EMA look and behave like twins. SMA is slower, but its signals are more accurate. EMA is faster but “hurries up too much” — some of its signals can be incorrect, requiring confirmation. In combination, they provide you with a more detailed price forecast! Read the strategy and add it to your trading plan!

A piece of theory

Moving Average is a popular trend indicator. It reflects the average price of an asset in a certain period. On the chart, it looks like a colored curve.

The main signals the MA provides:

- It goes up when the price rises and down — when it falls.
- It is below the price curve when the trend is up.
- It's above the price curve when the trend is down.

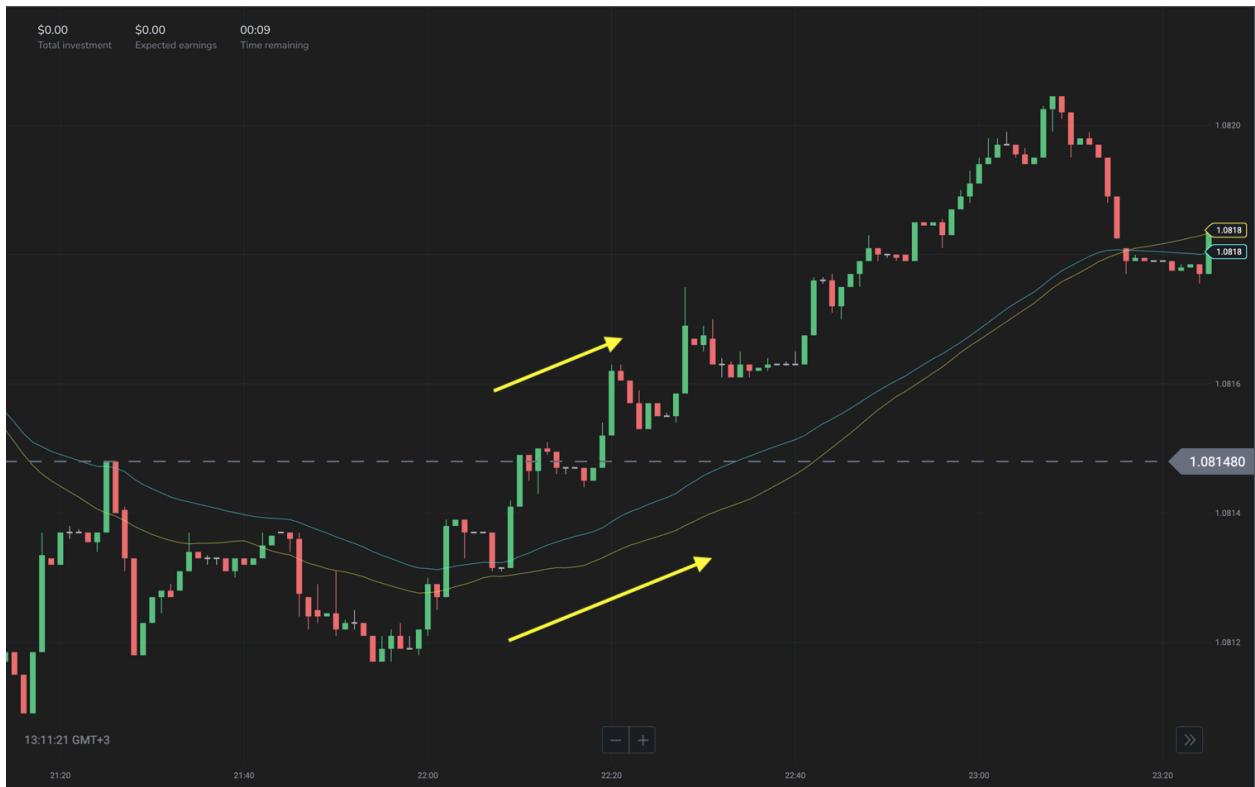

Preparation

Indicator	Settings
Simple Moving Average (SMA)	Default
Exponential Moving Average (EMA)	Default

Trading

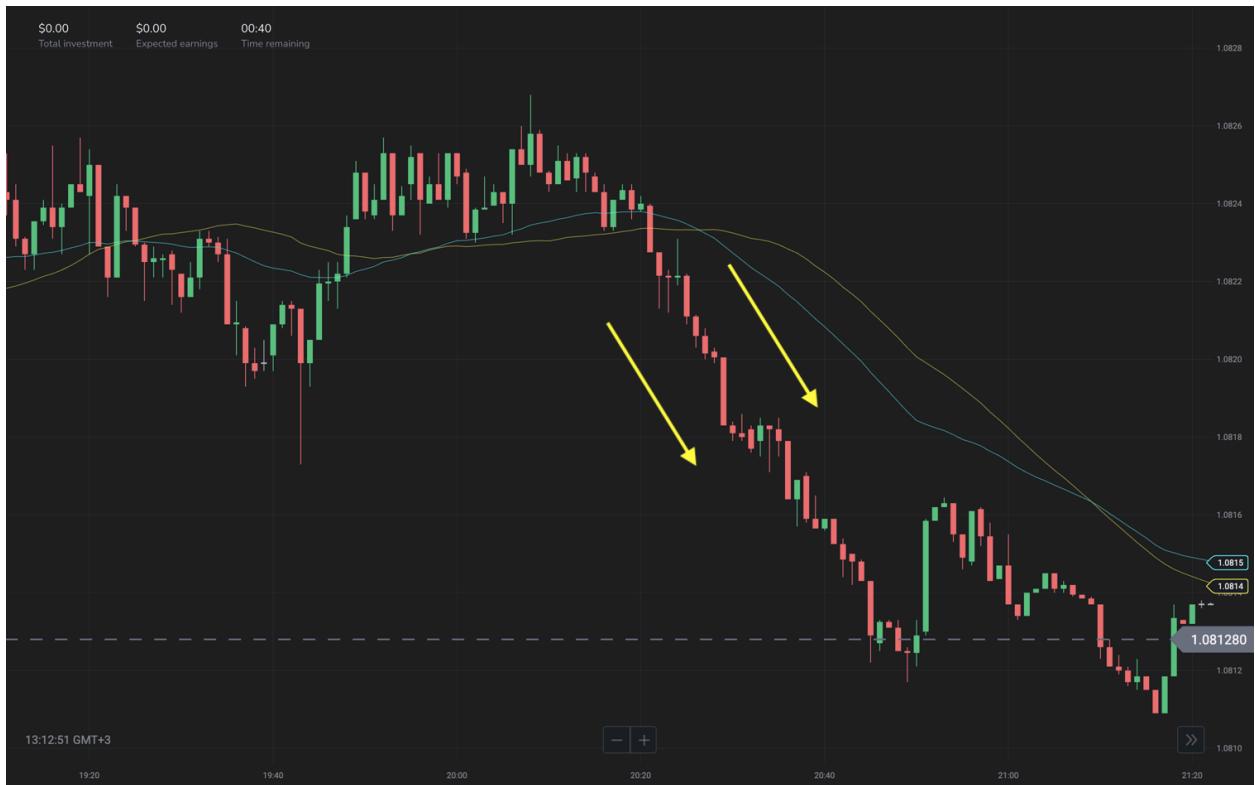

Trade UP, when:

1. The price starts rising
2. The EMA goes up
3. Then, the SMA rises
4. The price curve is above the EMA and SMA. Make a trade!

Trade DOWN, when:

1. The price starts falling
2. The EMA goes down
3. The SMA supports its signal and goes down, too
4. The price curve is below the EMA and the SMA. make a trade!

Notes

We recommend limiting the trade amount by 2% of your account balance. This will allow you to limit your losses.

Please remember that no strategy guarantees 100% success

CLOUDS (EMA, RSI)

Type of strategy: Trend
Timeframe: 15 - 60 s
Assets to trade: Currency pairs
Complexity level: Advanced

Clouds in our daily lives mean rain or snow. In trading, clouds indicate the opportunity to earn real funds. Read this strategy and apply it with pleasure!

Preparation

Indicator	Settings
Exponential Moving Average (EMA)	Period — 5
RSI	Period — 5 Overbought level — 70 Oversold level — 30

EMA is one of the fastest types of moving averages. It indicates upcoming trends. However, the indicator can provide false signals, so we complemented EMA with RSI. RSI measures the magnitude of price changes and indicates whether the asset price is over- or undervalued.

Trading

TRADE UP, when:

1. There is a downtrend, and the price is under the EMA.
2. RSI touches the level of 30 or crosses it upwards.
3. After a bearish candle (red), a bullish (green) one forms.

TRADE DOWN, when

1. There is an uptrend, and the price is above the EMA
2. RSI touches the level of 70 or crosses it downwards
3. After a bullish candle (green), a bearish (red) one forms.

Notes

We recommend limiting the trade amount by 2% of your account balance. This will allow you to limit your losses.

Please remember that no strategy guarantees 100% success
